## DETAILED ACTION

### *Priority*

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

### ***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nagase et al in view of Yamazaki et al. Nagase et al teaches a toner and method of forming an image. The toner is produced by having a release agent  $R_1-(OCOR_2)_n$  and a toner producing process Col. 22-Col. 24 utilizing the salting out / fusion process. Yamazaki et al also teaches the fusion/salting out method [0132] and [0135] in which coagulants are utilized such as trivalent metal salts. The metal salts can be aluminum note [0143]. Aluminum can also be used as a dispersion stabilizer in the form of alumina note [0141]. It would be obvious to one of ordinary skill in the art at the time of applicants' invention with a reasonable expectation of success to use aluminum in a method of producing a toner either as a coagulant in the polymerization of the resin binder or as a dispersion stabilizer in the polymerization of the resins.
